

Drone as First Responder

RPIC Reference Card - Preflight/Postflight Inspection Checklist

Dock for X10 Inspection Checklist

- Ensure all propellers are in good working condition. Propellers should be free of cracks or damage. Do NOT fly with damaged propellers.
- Check the condition of visible motor hubs.
- Inspect the condition of the drone body.
- Check the condition of any navigation cameras that are visible.
- Ensure the drone arms are properly aligned and fully extended.
- Make sure the battery is fully seated.
- Ensure any attachments are fully seated.
- Make sure any unused attachment bays are closed with the rubber seal.
- If flying over people, verify the Parachute is attached and verify that the red battery latch indicator is not visible on the attachment. If red is visible, the battery retention latch is not engaged.

Note: Refer to the Dock for X10 Operator Manual for full preflight inspection information. Also follow any guidance provided in Remote Flight Deck for any additional steps not outlined here. Refer to your organization's safe use policy for any additional preflight inspection steps or best practices that may be required prior to flight. Visit www.skydio.com/safety for additional safety information.
